STEEL SECURITY

R-SECURE

BESPOKE DOORS

At **R-Secure**, we design and manufacture bespoke steel security doors built to protect what matters most.

Every door is made to order, combining robust steel construction with carefully considered design to suit both residential and commercial environments. From front entrances and private residences to high-security applications, fire-rated doors, panic rooms, and commercial premises, our solutions are tailored to any project.

Our focus is simple: deliver doors that provide real security without compromising on appearance. Each product is engineered for strength, reliability, and long-term performance, while offering flexibility in design, finishes, and access systems.

Whether the priority is security, functionality, or architectural style, our doors are built to meet the demands of modern living and working spaces.

FROM CONCEPT TO COMPLETION
OUR PROCESS

CONSULTING

We assess your requirements and recommend the right level of security, design, and functionality for your project

DESIGNING

Each door is tailored to your exact opening, with detailed drawings and specifications prepared for approval

ENGINEERING

Our team develops the structural and technical aspects, ensuring strength, performance, and compliance

MANUFACTURING

Doors are precision-built using high-grade machinery, advanced fabrication, and quality-controlled processes

ASSEMBLY

Surface treatments, coatings, and cladding are applied to achieve both durability and the desired appearance

INSTALLATION

Professional installation ensures correct fitting, smooth operation, and full performance on site

SUPPORT

Ongoing assistance and maintenance to keep your door performing reliably over time.

EXCEPTIONAL DESIGNS

Each R-Secure door is crafted to make an impression, where design, proportion, and detail are carefully considered.

Every door is made to order, allowing complete freedom in style, proportions, and detailing. From bold contemporary statements to timeless, classic designs, each piece is tailored to suit the character of the property.

A wide choice of finishes, colours, and cladding options ensures every door is unique. Clean lines, precise geometry, and carefully selected materials come together to create a refined and balanced appearance.

Attention to detail defines every stage, from initial concept through to the final finish, resulting in doors that not only perform, but stand out.

The result is more than an entrance - it is a considered design element that leaves a lasting impression.

ADVANCED SECURITY

BUILT WITH PURPOSE

R-Secure doors are engineered to provide a high level of protection without compromising on usability or design.

Each door is built around a reinforced steel structure and equipped with multi-point locking systems designed to secure the entire door leaf, not just a single point.

Additional security features can be integrated depending on requirements, including enhanced locking configurations and reinforced components for higher levels of resistance.

Access control options are available to suit different environments, from traditional mechanical systems to electronic key fobs and biometric entry solutions.

Every door is developed to deliver reliable, consistent performance in both residential and commercial settings.

Circle Designs

SECURITY LEVELS

CLASS 3

Tested and certified by an accredited EU laboratory against a range of manual tools, including screwdrivers, pliers, crowbars, hammers, wedges and similar hand tools.

Typical attack scenario:

Opportunistic attempts on residential or light commercial properties, using basic tools, with concern for noise and limited attack time.

CLASS 4

Includes all Class 3 resistance, with additional protection against more advanced tools such as drills, axes, bolt cutters and cutting equipment.

Typical attack scenario:

Targeted, more pre-planned attacks by experienced intruders using heavier tools, with little concern for noise.

FB4 Bullet-resistant

Includes all Class 4 resistance, FB4 doors include certified ballistic steel layer designed to resist handgun fire.

Typical use:

Residential, high-end properties and locations requiring protection against handgun threats.

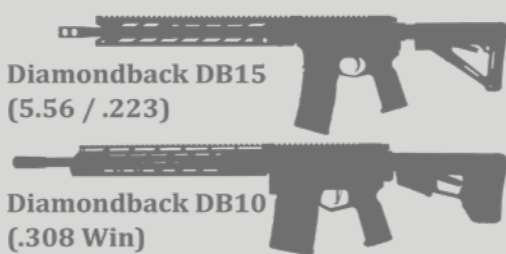

FB6 Bullet-resistant

Includes all Class 4 resistance, FB6 doors offer a higher level of ballistic protection, engineered to withstand rifle fire. This level is suited for environments where elevated security risks are present.

Typical use:

Commercial sites, secure facilities, and properties requiring protection against more powerful firearms.

FB7 Bullet-resistant

Includes all Class 4 resistance, FB7 provides maximum ballistic protection within door range, designed to resist high-calibre rifle threats under severe conditions.

Typical use:

Critical infrastructure, government & military buildings, and extreme security installations.

CREATE YOUR OWN

One of the biggest advantages of bespoke doors is the complete freedom to create your own design. You are not limited to set patterns, start with a sketch or a reference image from anywhere, and we will help turn your idea into a finished design

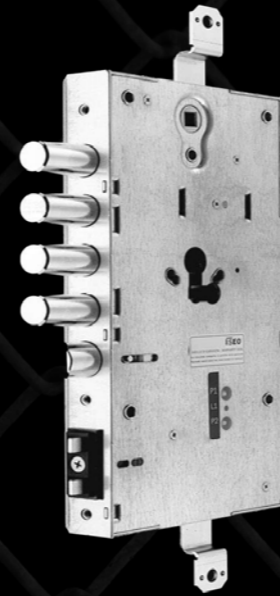

Contemporary Designs

LOCKING

All R-Secure doors come with multi-point locking and are supplied with the highest quality locking systems. In addition to the standard mechanical locks, you can upgrade to motorised options such as the ISEO X1R SMART lock. This system provide convenient access via smartphone, RFID devices, or keypad, while ensuring the door locks automatically after you close it, removing the risk of forgetting to lock it yourself. The SMART lock can also log access activity and integrate with your own systems for enhanced control.

Single action (anti-panic function) - unlock with single motion even if door is locked
